Set answer 2

Scenario based

1. Legal Document Review Agent System

Scenario: Three agents extract legal clauses, identify risky terms, and suggest revisions.

Logic:

1. Clause Extraction Agent extracts important clauses from the legal document.
2. Risk Detection Agent analyzes the clauses and identifies risky terms.
3. Revision Agent suggests improvements to risky clauses.
4. Each agent passes its output to the next agent.
5. If an agent fails, retry the task. If it still fails, log the error and notify the user.

2. Multi-Agent Code Review – Conflicting Feedback

Logic:

1. Code Review Agent checks code quality.
2. Security Agent identifies security vulnerabilities.
3. Performance Agent checks performance issues.
4. Coordinator Agent collects all feedback.
5. It compares suggestions, prioritizes critical issues, resolves conflicts, and produces a final recommendation.

3. Personalized Educational Tutoring System

.Logic:

1. Student Profile Agent identifies the learner's knowledge level.
2. Explanation Agent provides answers based on the learner's level.
3. Simplification Agent converts complex explanations into simple language and examples.
4. Quiz Agent evaluates the student's understanding.
5. Based on quiz results, the system adjusts the explanation difficulty.

4. Nested Agent System for Legal Q&A.

Logic:

1. Main Agent receives the user's legal question.
2. Research Agent gathers relevant legal information.
3. Analysis Agent examines the information in detail.
4. Verification Agent checks the answer for accuracy and completeness.
5. Main Agent combines the results and generates the final response.

5. Marketing Campaign – Outdated Content

Logic:

1. Data Collection Agent collects current trends from APIs, news, and social media sources.
2. Trend Analysis Agent identifies popular topics.
3. Content Generation Agent creates marketing content based on the latest information.
4. Validation Agent checks the freshness and relevance of the content.
5. The final content is shared with the user.

6. Project Management Agents Working Independently

Logic:

1. Deadline Agent tracks project deadlines.
2. Resource Agent monitors resource availability.
3. Risk Prediction Agent identifies project risks.
4. All agents share updates through a common communication system or shared state.
5. Agents coordinate their decisions based on updates from other agents.
6. This improves coordination without requiring one central agent to control every task.

7. Secure HR Document Generation

Logic:

1. Document Generation Agent creates the HR document.
2. Privacy Agent identifies confidential information such as employee IDs, salary details, and personal information.
3. Security Agent checks access permissions and data-handling rules.
4. Validation Agent verifies the final document before delivery.
5. If sensitive information is detected, the output is blocked or redacted.

8. Language Learning Chatbot – Inconsistent Responses

Logic:

1. Translation Agent translates the sentence.
2. Grammar Agent explains the grammar rules using the original sentence and translation.
3. Quiz Agent generates questions based on the same grammar concepts.
4. All agents use a shared context or common knowledge base.
5. A Validation Agent checks consistency before displaying the final response.

9. Finance App Ignoring Recent News

Logic:

1. News Retrieval Agent collects the latest financial news.
2. Event Analysis Agent identifies important events such as interest rate changes.
3. Investment Analysis Agent evaluates how those events may affect investments.
4. Strategy Agent updates its recommendations using the latest information.
5. The final result includes the relevant news context and its potential impact.

10. E-commerce Assistant Failing Under Heavy Load

Logic:

1. Recommendation Agent handles product recommendations.
2. Order Tracking Agent manages order-related queries.
3. Customer Support Agent handles general questions.
4. Monitoring Agent checks agent health and system performance.
5. If an agent fails, the system retries or redirects the task to another available agent.
6. Error messages and status updates are provided to users instead of failing silently.
